Austin, TX

Freelance Web Development

📍 Austin, TX 📅 Aug. 2023 - Present

Using my skills from my work experience and knowledge of the latest web technologies, I built websites from scratch for local small businesses. Below are some of my latest projects, which are live at the provided urls.

Counselors Mortgage - <https://counselorsmortgage.com/>

I created a complete site with **React** centered around simplicity and clear calls to action, with a friendly, minimal design, using **Figma** to iterate the design and get client feedback.

Thompson Advisory, LLC - <https://thompsonadvisoryllc.com/>

This client just needed a simple one page site with some info and a contact form, so I quickly turned around a page with a nice looking design and some animation.

Woolley Creative - <https://woolleycreative.com>

For this project I decided to make a custom single page application framework in raw Javascript, and make an animation framework on top of that. This site contains many different and interesting scroll animations that integrate with the client's site design.

HTML5 CSS3

Javascript

React Figma

Responsive Design

UI/UX SPA

Scroll Animations

Front End Software Developer - Microsoft (Insight Global)

📍 Seattle, WA 📅 Feb. 2023 - Sept. 2023

This position was on a small team of developers creating a web application for sending and managing customer emails. Being the sole front-end developer, I was responsible for the look and feel of the entire product. I leveraged modern technologies to efficiently design, build, and test the application.

- Organized meetings to discuss my designs and ideas for new site features
- Worked on developing and testing each front end feature
- Conducted code reviews across team members to ensure synchronicity and quality code

React

TypeScript

Custom Hooks

React Testing Library

Jest YAML

Azure DevOps

Software Developer - MacDonald Miller

📍 Seattle, WA 📅 Jan. 2022 - Jul. 2022

The purpose of this project was to create a web application that creates and manages estimates for construction jobs for the company. I worked on a small team with three other developers so I was able to play a bigger role than before in the design and development.

- Utilized an **Agile workflow** and **Azure DevOps** features to stay organized and work efficiently.
- With my front end experience, I took a leading role in the visual design and user experience of key parts of the application.
- Used my **UX** experience to make suggestions to the team and project manager about how to improve the logic and operation of features.
- Used **SQL** transactions, stored procedures, and schema comparisons for back end tasks

Angular C#

UI/UX SQL

Full Stack Software Developer - Accenture

📍 Redmond, WA 📅 Sept. 2020 - Dec. 2021

Working for a consulting firm gave me exposure to many different projects and technologies. I worked on various projects for Microsoft

- **Angular, Node.js, PostgreSQL:** A tool for creating business scenarios and estimates. I created a dynamic filtering tool that changes its available selections based on the filtered content to make a large list of filters easy to manage as a user.
- **Angular, C#, SQL:** A Full stack web application for managing and visualizing Microsoft incident tickets. I worked with front end, API, and back end code for various site improvements and features.
